# Appendix 1 – Palettes by category

**Important.**

*The palette names in this appendix are standard, but some `@prism` implementations add a specific prefix.*

**Note** (Qualitative and semantic palettes).

*The threshold of 40 colors has been established for qualitative and semantic palettes. The following lines outline the rationale for this limit.*

- *In qualitative color palettes, each color represents a single data point or a group of data. Experience shows that about ten colors are more than enough.*
- *Semantic palettes associate a color with a specific context, such as warning levels (see the three frames in this document). Choosing 40 colors allows for 10 different contexts, each with 4 sub-categories. Here are some examples of sub-categories.*

  ***10-19*** ***Initial / Idle:*** *default states such as "To Do", "Clickable", or "To be analyzed".*
  ***20-29*** ***Active / Transition:*** *states in flux, including "In Progress" or UI "Hover" effects.*
  ***30-39*** ***Success / Final:*** *terminal positive states like "Done", "Clicked", or "Validated".*
  ***40-49*** ***Alert / Rejection:*** *error handling and negative outcomes, e.g., "Error", "Inactive", or "Rejected".*

**Important.**

*Categories were generated semi-automatically, followed by manual selection to obtain relevant choices.*

## Colorblind palettes

Colorblind palettes provide high-contrast hues specifically optimized for users with color vision deficiency.

**Acton**

**Bam**

**Bamako**

**BamO**

**Batlow**

**BatlowK**

**BatlowW**

**Berlin**

**Bilbao**

**Broc**

**BrocO**

**Buda**

**Bukavu**

**Cork**

**CorkO**

**Cubehelix**

**Davos**

**Devon**

**Fes**

**Glasgow**

**Safe**

**Tofino**

**Tokyo**

**Turku**

**Vanimo**

**Vik**

**VikO**

**Wistia**

## Cyclic palettes

Cyclic palettes create seamless loops for periodic data, such as angles, seasons, or 24-hour cycles.

**CopperCM**

**Emergency**

**Flag**

**Infinity**

**RainbowCP**

**Seasons**

**SineBow**

## Dark palettes

Dark palettes offer high-contrast schemes specifically optimized for terminal interfaces and dark-mode backgrounds.

## Qualitative palettes

Qualitative palettes use distinct hues to separate categorical data without implying any order or hierarchy.

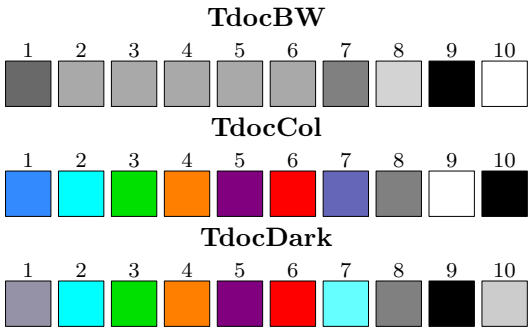
## Semantic palettes

Semantic palettes assign colors to categories — such as UI states, system status, or pedagogical elements — to convey immediate meaning.



## Sequential palettes

Sequential palettes represent ordered data using a single or multi-hue gradient with increasing lightness.
