Appendix 2 – Similar palettes

This appendix contains visually similar color palettes. While the differences between some are minimal, we have retained them to respect individual preferences.

Important.

Clusters were generated semi-automatically using a program that suggests similar palettes, followed by manual curation to retain only relevant groupings.[a] *This approach may occasionally miss some similarities. If you identify any omissions, please contact the author of* `@prism`.

[a] The palettes are analyzed in both light and dark modes.
