

Fix.

- Equal palettes: the floating point equality uses now a correct tolerance.

Break.

- Palettes: the extra **Greys** has been removed (it is the reverse of **Binary**).

New.

- Similar palettes: two PDF files show similar palettes in standard and black modes (semi-automated process used).

Update.

- **luadraw** product: the associative array **palNames** has been added for compatibility reasons with the **luadraw** package.
- **BlindFish** palette: the last color variation has been made smoother (**luadraw** process used).
