

I. Motivations

Originally, this project was born out of a desire to enhance `luadraw` with a set of color palettes to easily produce something like the following 3D plot.

Technically, a finite list of colors is provided to `luadraw` which then uses linear interpolation to calculate the intermediate colors. In the previous case, the finite color palette used is defined as follows.

Using this palette, `luadraw` is able to produce the following spectrum, allowing us to create the graph above.

Note.

Using the `luadraw` implementation of `@prism`, see the section ??, we can display the palettes below made from the previous one named '`'GeoRainbow'`'. Each `luadraw` instruction used is given below each palette.

`getPal('GeoRainbow', {reverse = true})`

`getPal('GeoRainbow', {shift = 3})`

`getPal('GeoRainbow', {extract = {7, 15, 4}})`
