@prism project

«AUTHOR»

«DATE-N-VERSION»

The `@prism` project[1] provides small size color palettes that can be used to create expressive color maps for graphics in different contexts.

---

[1] The name comes from "`@` · *esthetic* `P` · *roducts* *for* `R` · *epresenting* `I` · *nformative* `S` · *cientific* `M` · *aps*". This name is a double play on words: [1] a prism splits light into an informative spectrum, symbolizing how data are decomposed into meaningful color, and [2] "@" read as "at" indicates where the light meets the prism to be broken down into an informative spectrum.
