`@prism` **project**

«AUTHOR»

«DATE-N-VERSION»

The `@prism` project [1] provides small size color palettes that can be used to create expressive color maps for graphics in different contexts.

---

[1] The name comes from "**@ · esthetic P · roducts** *for* **R · epresenting I · nformative S · cientific M · aps**". This name is a double play on words: [1] a prism is where light is split into an informative spectrum, symbolizing how data or visuals are decomposed into meaningful color and style, and [2] where light meets the prism, it breaks down into an informative spectrum ("@" can be read "at").
