1. Complete the translations

> 📌 **Important.**
>
> *Although we're going to explain how to translate the documentation, it doesn't seem relevant to do so, as English should suffice these days.*

```
📁 translate
├── 📁 changes
├── 📂 en
│   └── 📁 manual
├── 📁 status
│   └── 📂 en
│       └── manual.yaml
├── README.md
└── LICENCE.txt
```
Figure 1: Simplified view of the translation folder

The translations are roughly organized as in figure 1 where just the important folders for the translations have been "*opened*".[1] **A little further down, the section e explains how to add new translations**.

a. The `en` folder

This folder, managed by the author of `@prism`, contains files easy to translate even if you're not a coder.

b. The `changes` folder

This folder is a communication tool where important changes are indicated without dwelling on minor modifications specific to one or more translations.

c. The `status` folder

This folder is used to keep track of translations from the project's point of view. Everything is done via well-commented `YAML` files, readable by a non-coder.

d. The `README.md` and `LICENCE.txt` files

The `LICENCE.txt` file is aptly named, while the `README.md` file takes up in English the important points of what is said in this section about new translations.

e. New translations

> ℹ️ **Note.**
>
> *The folder* `manual` *is reserved for documentation. It contains* `TEX` *files that can be compiled directly for real-time validation of translations.*

> ☠️ **Warning.**
>
> *Only start from the* `en` *folder, as it's the responsibility of the* `@prism` *author.*

Let's say you want to add support for Italian from files written in English.[2] To do this, you must use `Git` as follows.

1. Via https://github.com/projetmbc/for-writing/tree/aprism/@prism, recover the entire project folder. Do not use the `main` branch, which is used to freeze the latest stable versions of projects in the single https://github.com/projetmbc/for-writing repository,.

---

[1] This was the organization on October 26, 2025.

[2] As mentioned above, there is no real need for the `doc` folder.

2. In the `@prism/contrib/translate` folder, create an `it` copy of the `en` folder, with the short name of the language documented in the page "*IIETF language tag*" from `Wikipedia`.

3. Once the translation is complete in the `it` folder, share it via https://github.com/projetmbc/for-writing/tree/aprism/@prism using a classic `git push` .
